

SQL Account : Backup & restore Database

SQL Account gives users the option to backup their own database into their local computer or into a cloud drive storage. You can do it as frequent as daily backups or weekly. Users have full ownership over their backups and can restore them anytime they want to without any additional charges.

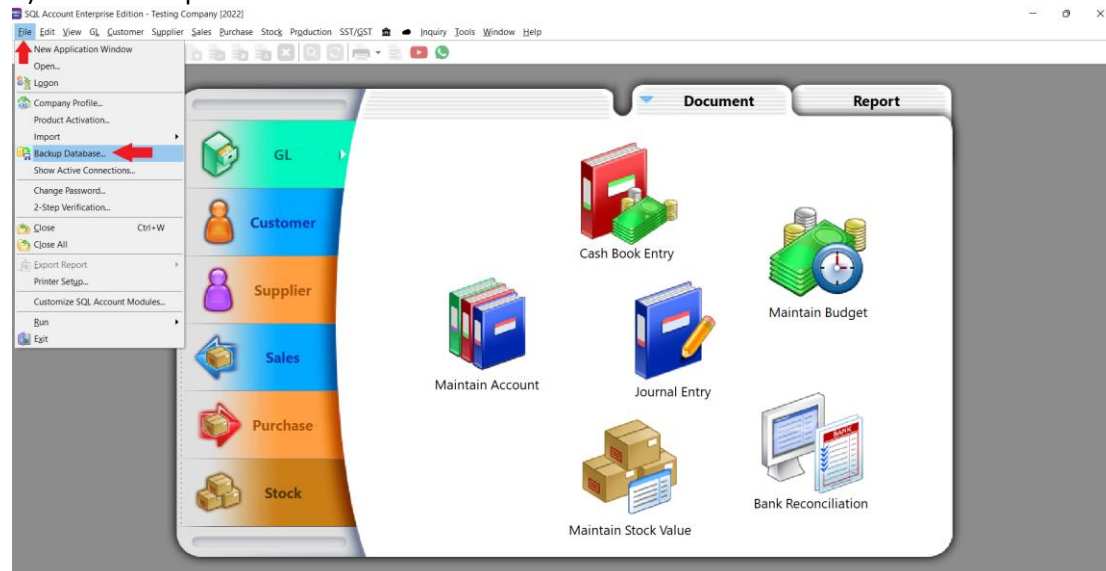

Why must I backup my database?

In any situation, it is always useful to have a backup copy of your work. It is good practice to regularly backup your SQL Account data for these few reasons:

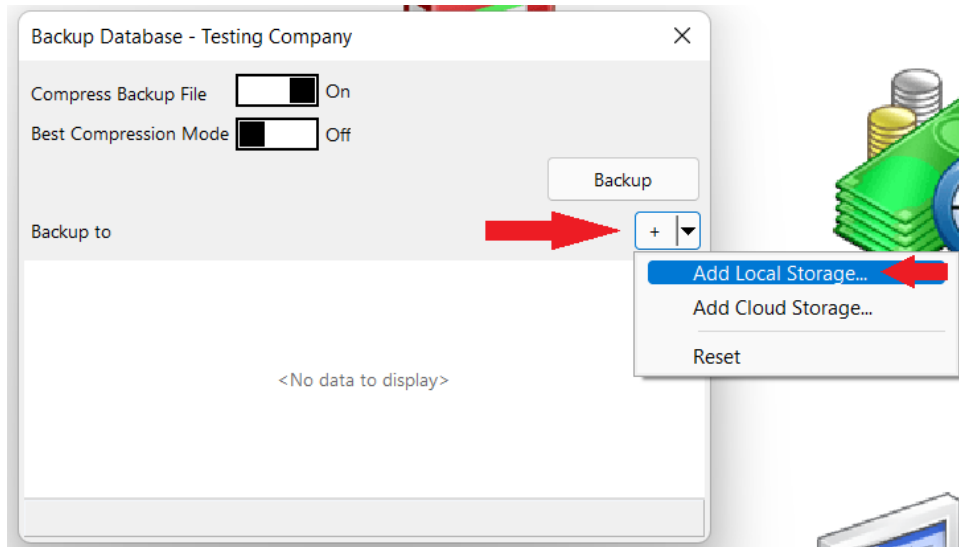

- 1) Faster data recovery in emergency situations
- 2) Ability to perform cross checking and comparisons with past data
- 3) Protection against ransomware attacks, cyber crimes
- 4) Easy and secure sharing of data within the company

How do I backup my database in my local computer?:

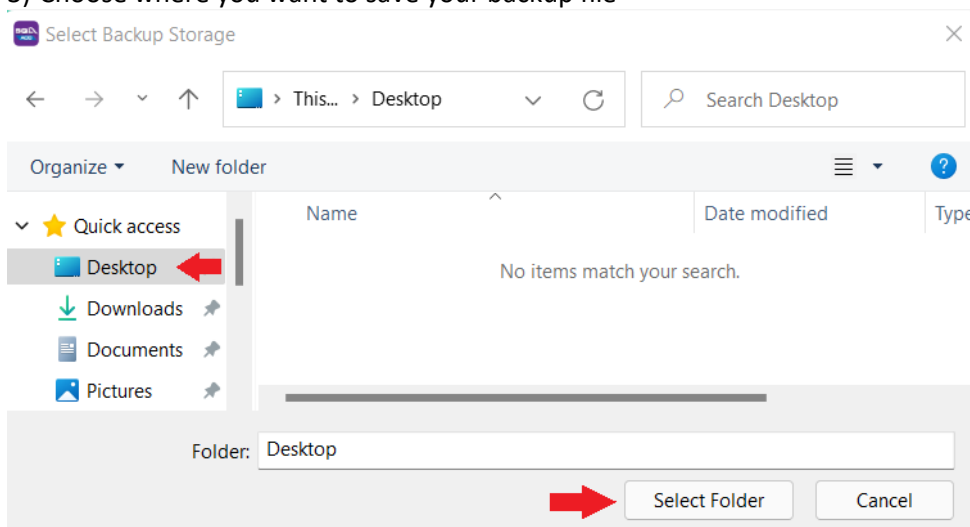

1) File > Backup Database

- 2) Click on + and Add Local Storage
- May select multiple Storage location

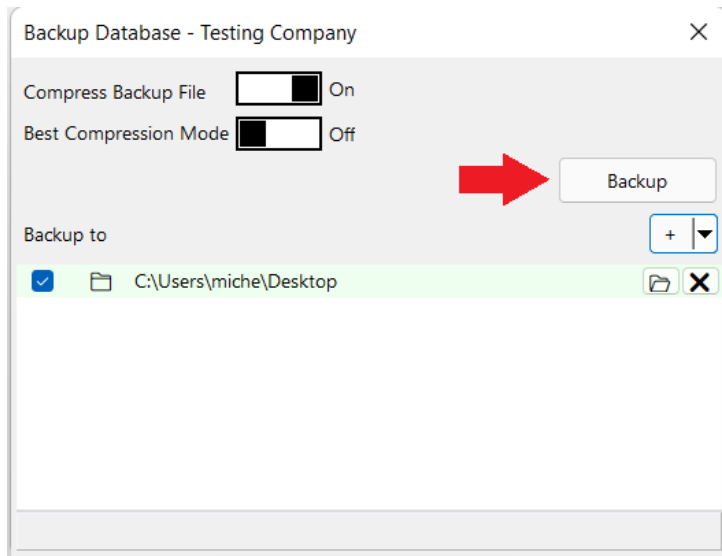

3) Choose where you want to save your backup file

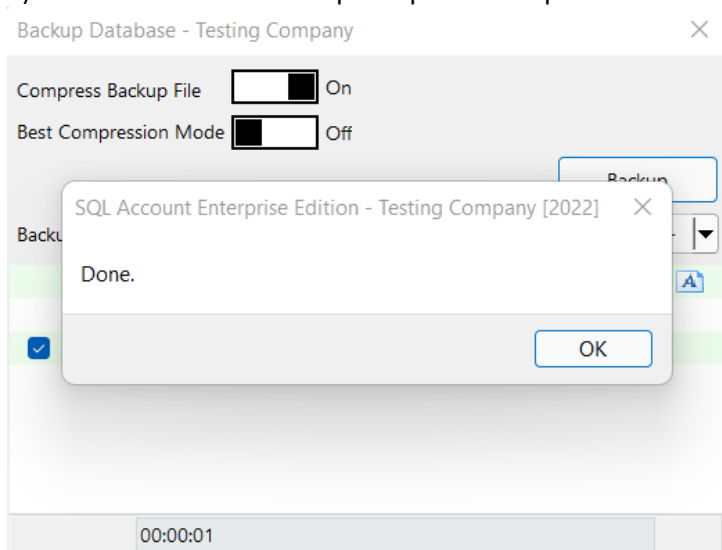

4) Click Backup

Compress Backup File : Will put backup file into ZIP file

Best Compression Mode : Takes longer than normal backup, file size will be smaller

5) Shows **Done** once backup completed and press OK

6) You will see a zip file in the location that you have selected.
